Why should we care about CFT's?	CFT Handbook	Simple results	The Ising Model: 2D vs 3D	Summary 00
Ising model				

Model to describe critical phenomena (ex: phase transition in ferromagnetism).

Based on a spin lattice with nearest-neighbors interactions:

$$H = -\frac{1}{T} \sum_{i} \sum_{j \sim i} \sigma_i \sigma_j$$

Continuum limit: iteratively sum the spins in a block of size n and replace  $\sigma_i$  with the average value.

QFT described by a scalar field  $\sigma(x)$  with non local interactions.

Why should we care about CFT's? ○●○	CFT Handbook	Simple results	The Ising Model: 2D vs 3D	Summary 00
Ising model				

Model to describe critical phenomena (ex: phase transition in ferromagnetism).

Based on a spin lattice with nearest-neighbors interactions:

$$H = -\frac{1}{T} \sum_{i} \sum_{j \sim i} \sigma_i \sigma_j$$

Continuum limit: iteratively sum the spins in a block of size n and replace  $\sigma_i$  with the average value.

QFT described by a scalar field  $\sigma(x)$  with non local interactions.

At the critical temperature the QFT flows to an IR fixed point. How can we deal with such a theory?

000	000000	00	000000000	00

### What is the central charge of the Ising Model?

The minimum is in correspondence of Ising. It predicts  $c_T^{\rm Ising}/c_T^{\rm free}\sim 0.94-0.95$ 

No accurate measurement nor calculation to compare with.  $\epsilon-{\rm expansion}$  at first order gives  $c_T^{\rm lsing}/c_T^{\rm free}\sim 0.98$ 

#### Note on 2D

Similar methods give  $c_T^{\text{lsing}} \sim 0.4999$  and  $c_T^{\text{exact}} = 0.5$ .

Why should we care about CFT's?	CFT Handbook 0000000	Simple results	The Ising Model: 2D vs 3D	Summary O
Conclusions				

 Conformal bootstrap gives us insights about genuine strongly coupled CFT's

• We built a machinery that deals with space-time dimensions democratically (although in even dimension we have more tools)

Why should we care about CFT's?	CFT Handbook	Simple results	The Ising Model: 2D vs 3D	Summary O

Conclusions

- Conformal bootstrap gives us insights about genuine strongly coupled CFT's
- We built a machinery that deals with space-time dimensions democratically (although in even dimension we have more tools)
- SCT's can be explored in a similar fashion.  $\mathcal{N}=1$  already started,  $\mathcal{N}=2,4$  on the "to-do" list.
